

Be The Difference, Save a Whale

WHEXcosystem

Technical White Paper - 3rd Edition

What is the WHEXcosystem?

The WHEXcosystem is a collection of six related deflationary DeFi tokens on the Binance Smart Chain Network. Launched on June 19th, 2021, the tokens are linked via a collection of “tide pools”, or liquidity pairs that enable swapping tokens up and down the chain. Also, BNB (Binance Smart Chain) liquidity pools paired with each token allow for on/off ramps at each tier of the WHEXcosystem. The on/off ramps to and from BNB utilize [intentionally high](#) transfer fees, (tokenomics), in order to discourage crypto whale sell-offs and “pump and dump” schemes.

These tokenomics are core to the mechanics and provide for bi-weekly donations to registered charities to save real whales, deflationary burn events, and reflections for holders.

MISSION

Saving the whales, by Exploding Crypto Whales!

First and foremost, our mission is to raise money for whale conservation.

The WHEXcosystem is designed to build a community around a collection of crypto assets in order to increase valuation and donate a significant portion of the transaction fees to a selected set of well-known whale conservation charities. The remaining transfer fees are split between regular burn events and being redistributed equally to holders.

Our WHEXcosystem team is dedicated to transparency. We strive to accept community input on key decisions through governance tokens and public votes. We always provide full disclosure and “bring receipts” concerning donations, burns, re-investment, and team changes.

CHARITABLE DONATIONS

SAVE THE WHALES

This organization was our first charity partner for our bi-weekly sell-off donations.

Website: <https://savethewhales.org/>

Their Mission-

Save the Whales was founded in 1977 when Maris Sidenstecker was 14 years old, and focuses on education the public, especially children, about marine mammals, and the fragile ocean environment.

Save the Whales believes children, the future of the planet, need to be empowered and know that their actions can promote change. Education is the key to saving whales, oceans and ourselves. We invite you to become a member of Save the Whales, a widely admired nonprofit organization that has been working tirelessly to protect marine life for over 40 years. Your support enables Save the Whales to continue their valuable work to protect marine mammals.

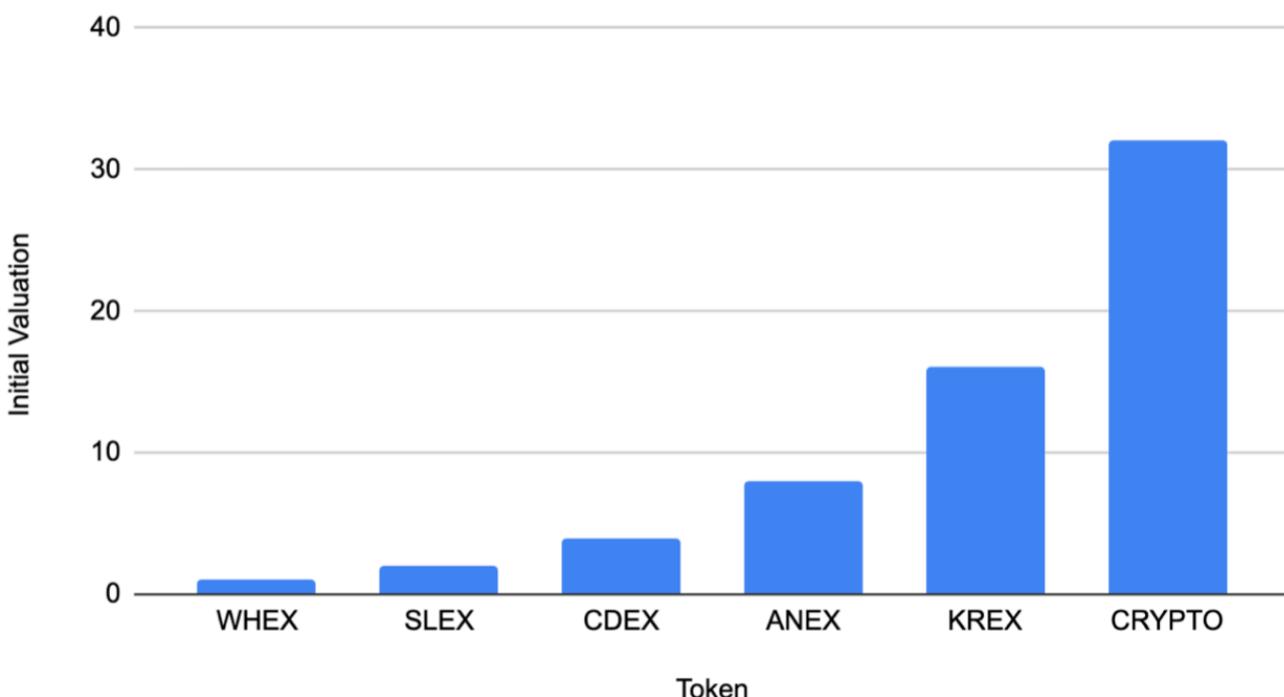

TOKEN BURNING

Tokens are burned bi-weekly, along with the charitable donation cycle, and also during special events designed to accelerate burn rates. At a minimum, tokens are burned according to the tokenomics for each token every two weeks. There is a charity cap of 4.2% of liquidity and there must be at least 20 BNB of liquidity remaining in order for the charity sale to occur. Tokens in the charity/burn wallet that do not qualify for the sell-off for charity will be burned. This prevents charity sell-offs from severely impacting the growth of the tokens.

TIDE POOLS

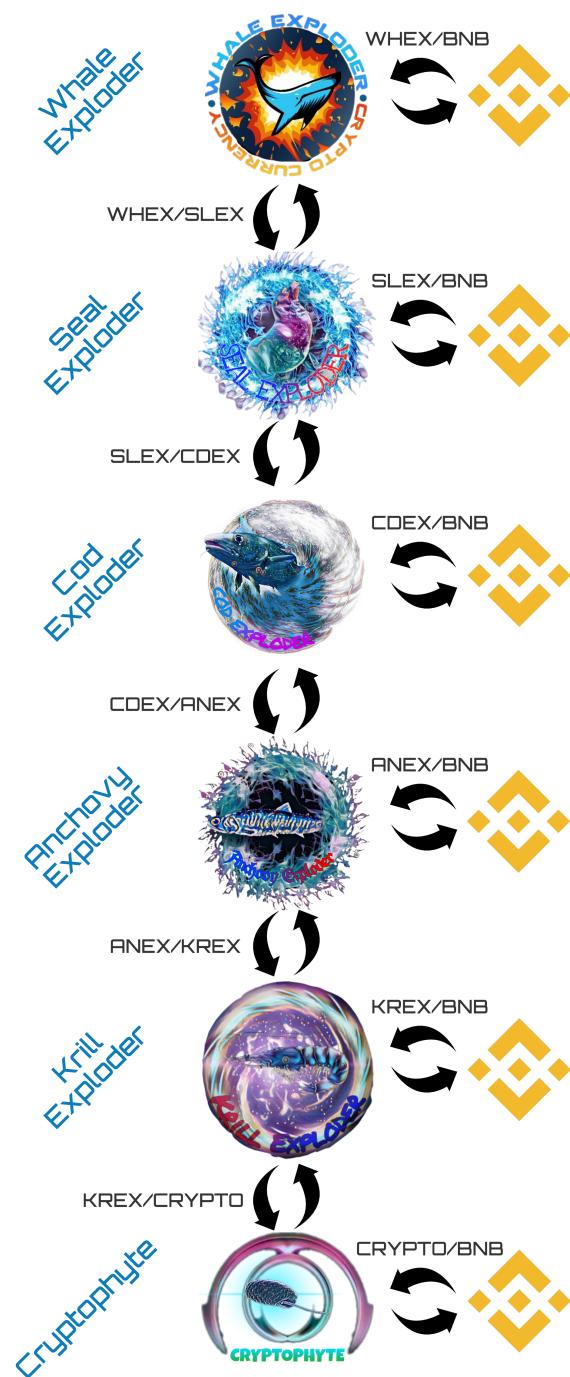

“Tide pools” refers to the liquidity pools between the WHEXcosystem tokens. These liquidity pools are free of tokenomics and so may be swapped for only the Binance Smart Chain fees, which are minimal. The initial liquidity pools between the tokens were populated at a 1:2 ratio which matches their relative initial supplies. This means that the base valuation of 1 CRYPTO is 2 KREX. 1 KREX is 2 ANEX. 1 ANEX is 2 CDEX. 1 CDEX is 2 SLEX. 1 SLEX is 2 WHEX. Like any liquidity pool, these ratios will change based on trading activity. Below is a visual representation of the initial relative valuation.

Initial Tide Pool Valuation in WHEX

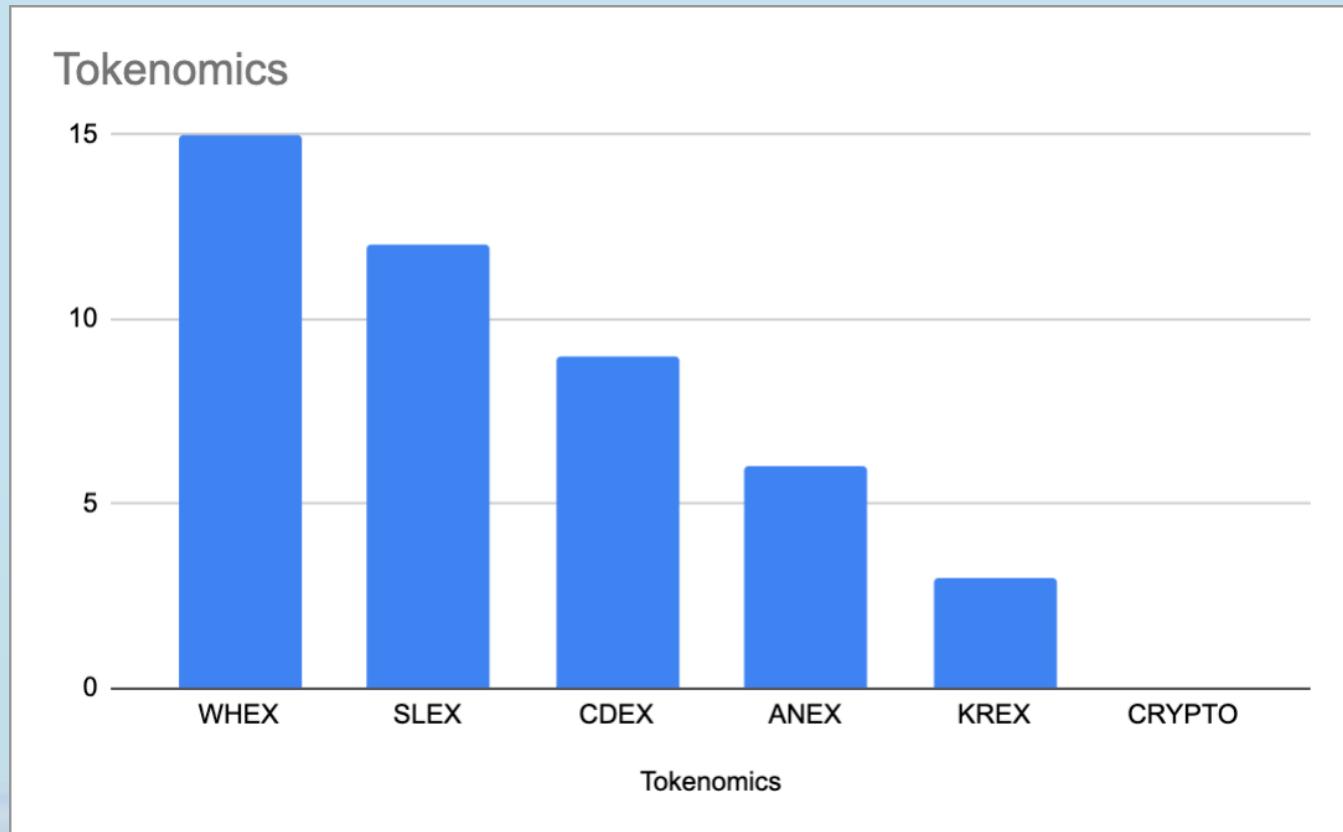

INTERACTING WITH WHEXCOSYSTEM

Tokens may be traded with holders over the Binance Smart Chain network, or swapped through various liquidity pools. Details for each token are in the appendix. There are 11 liquidity pools shown here that allow for market price exchange.

TOKENOMICS

Each token has unique tokenomics. Each is broken down into reflections, burn / charity, and automatic liquidity building. Details in the next section.

WHALE EXPLODER (WHEX)

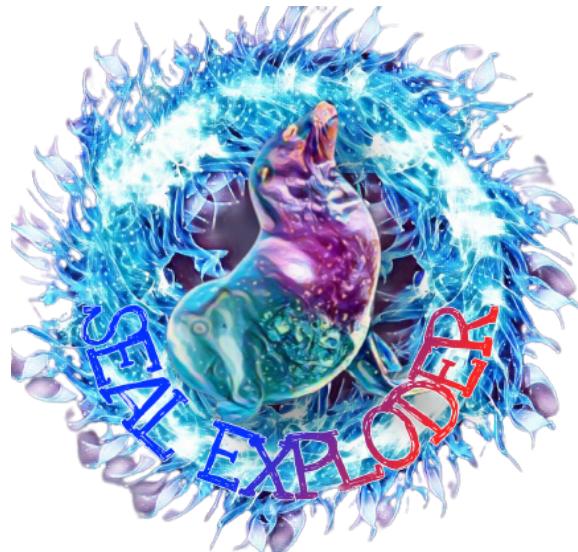

At the top of the tide pools, we have WHEX, or Whale Exploder. WHEX has the highest initial supply of over 999 Quintillion tokens. This token has the highest tokenomics, divided as follows:

Transaction fee into or out of WHEXcosystem: 15%

5% of every transaction is sent to a charity/burn wallet. Of that 5%, 58% is sold every two weeks and donated to a whale conservation charity. This sale is capped at 4.2% of liquidity in the WHEX/BNB pool and a floor of 20 BNB. The remainder is sent to a burn wallet. As of October 5, 2021, more than 14% of the initial token supply has been burned.

5% of every transaction is redistributed to the holders in the form of real-time reflections.

The remaining 5% goes into WHEX/BNB liquidity to stabilize the price impact of transfers.

SEAL EXPLoder (SLEX)

The second token in the WHEXcosystem is SLEX, or Seal Exploder. SLEX has an initial supply of 500 Quintillion tokens. This token has tokenomics, divided as follows:

Transaction fee into or out of WHEXcosystem: 12%

4% of every transaction is sent to a charity/burn wallet. Of that 4%, 58% is sold every two weeks and donated to a whale conservation charity. This sale is capped at 4.2% of liquidity in the SLEX/BNB pool and a floor of 20 BNB. The remainder is sent to a burn wallet.

4% of every transaction is redistributed to the holders in the form of real-time reflections.

The remaining 4% goes into SLEX/BNB liquidity to stabilize the price impact of transfers.

COD EXPLoder (CDEX)

The third token in the WHEXcosystem is CDEX, or Cod Exploder. CDEX has an initial supply of 250 Quintillion tokens. This token has tokenomics, divided as follows:

Transaction fee into or out of WHEXcosystem: 9%

3% of every transaction is sent to a charity/burn wallet. Of that 3%, 58% is sold every two weeks and donated to a whale conservation charity. This sale is capped at 4.2% of liquidity in the CDEX/BNB pool and a floor of 20 BNB. The remainder is sent to a burn wallet.

3% of every transaction is redistributed to the holders in the form of real-time reflections.

The remaining 3% goes into CDEX/BNB liquidity to stabilize the price impact of transfers.

ANCHOVY EXPLODER (ANEX)

The fourth token in the WHEXcosystem is ANEX, or Anchovy Exploder. ANEX has an initial supply of 125 Quintillion tokens. This token has tokenomics, divided as follows:

Transaction fee into or out of WHEXcosystem: 6%

2% of every transaction is sent to a charity/burn wallet. Of that 2%, 58% is sold every two weeks and donated to a whale conservation charity. This sale is capped at 4.2% of liquidity in the ANEX/BNB pool and a floor of 20 BNB. The remainder is sent to a burn wallet.

2% of every transaction is redistributed to the holders in the form of real-time reflections.

The remaining 2% goes into ANEX/BNB liquidity to stabilize the price impact of transfers.

KRILL EXPLODER (KREX)

The fifth token in the WHEXcosystem is KREX, or Krill Exploder. KREX has an initial supply of 62.5 Quintillion tokens. This token has tokenomics, divided as follows:

Transaction fee into or out of WHEXcosystem: 3%

1% of every transaction is sent to a charity/burn wallet. Of that 1%, 58% is sold every two weeks and donated to a whale conservation charity. This sale is capped at 4.2% of liquidity in the KREX/BNB pool and a floor of 20 BNB. The remainder is sent to a burn wallet.

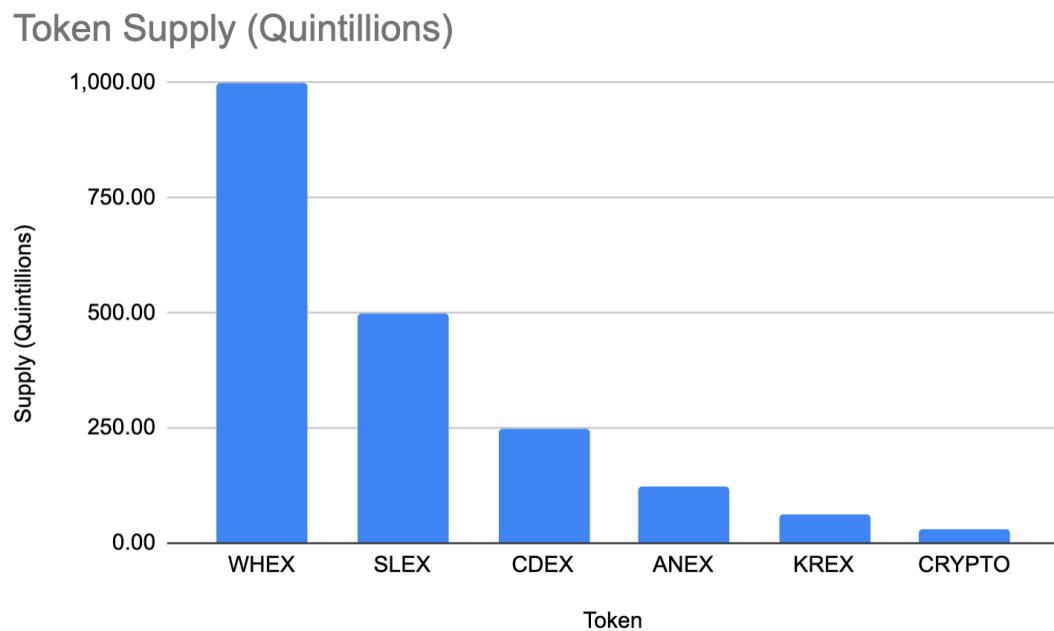

1% of every transaction is redistributed to the holders in the form of real-time reflections.

The remaining 1% goes into KREX/BNB liquidity to stabilize the price impact of transfers.

CRYPTOPHYTE (CRYPTO)

The sixth token in the WHEXcosystem is CRYPTO, or Cryptophyte. CRYPTO has an initial supply of 31.25 Quintillion tokens. This token has no tokenomics.
